**Academic year:2021/2022**

**Essay about me and my speciality**

My name is Yana and I'm 22. I was born in a military family. I have a sister who is younger than me by three years. She is studying at the same university as me.

I have many different interests. I love photography, but I like to be a model no less. It is also a great pleasure I get from watching movies. Recently, I was fond of reading books on psychology. I'm good at cooking different sweets. I love riding a bike, walking and outdoor recreation.

After graduating from high school there was a serious choice in front of me. It is the choice of future profession. After making my decision, I went to university.

For today I am a candidate for a master's degree specialty geodesy at East Kazakhstan State Technical University. Our university is one of the best in the country and the best in the region.

My future profession is in demand and relevant in our region and the world at large.

I'll tell you a little about geodesy. Since ancient times, people have been engaged in measuring of land and mapping the Earth. Now the work of the geodesist is to conduct calculations and measurements in construction, monitoring deformations of structures, preparation of charts and maps. To work geodesist use different devices. These include the theodolite, leveling instrument, tachymeter, reflector, roulette, GPS-navigator, etc. Geodesist's work has its own challenges and obstacles. Instruments used during operation are susceptible to weather conditions. All the measurements should be carefully checked several times. Because it affects the stability of structures, and therefore the lives of people.

While studying, I work as a cartographer in the "Department of Architecture and Urban Planning of the city of Ust-Kamenogorsk". I am satisfied with my work. Here I learned a lot. For example, to work with drawings, diagrams, maps, process measurement data. The ability to read maps is very useful and can be useful in life.

In conclusion, I note a decent standard of education received at our university. And I hope to improve my knowledge gained in the four years of study on the Bachelor of geodesy and mapping.

Exam

Read the above text carefully and try to write an essay about yourself and your graduation specialty. (Min 300 and Max: 400 words)

Handwriting with Family name, Surname , specialty
