

## **THE POWER OF LEARNING ENGLISH WITH GEOMATICS ENGINEERING STUDENTS PERSPECTIVE**

Fadhilla Chintia Widoesmi

### **Introduction**

Speaking is an important aspect needed in social life. Language is important because it is used as a communication tool. In the world of college, English is very urgent. In addition to being a means of communication, English in college is a learning tool. The initial stage of preparing someone before stepping is to know and learn. The journey to develop knowledge and skills is learning. On the way, we are sure to find many things that make some one ask questions. Find out what is unknown. Being a student is the stage before stepping into the world of work. Many things must be prepared from now. Language understanding makes it easier for us to move to become better and greater people. English can bring someone to know anything, anyone, anytime, and anywhere because it is not limited by language.

Becoming a geomatics engineering student is an opportunity not to be missed. Learn to share what was previously unknown. Development of knowledge and skills that enable a person to develop. English can bring and deliver someone who develops to all corners of the world. Students have an obligation to study. Students can deepen their knowledge and skills with the help of English to make it easier to find reading references and literacy. Geomatics engineering students will find it easy to understand the tools used for surveys if they have read references and literacy. The most widely available references are journals and books English. That way understanding English becomes important in all aspects. To be able to master the field we choose, English is very important and makes it easier for someone to carry out their duties and develop knowledge and skills.

### **The Necessity of Learning English for Engineering Students**

Learning is a student's obligation. Students certainly have the right to learn many things, one of which is learning English. Engineering students have the right to do various ways to support their learning activities and skills. Now learning and developing skills has become easy with the developing of technology. Access to communicate globally with

English is increasingly developing in the era of digital technology (Rintaningrum, Aldous dan Keeves, 2017). Technology makes it easy to do many things.

Learning English as a foreign languages takes more time and involves a longer process (Rintaningrum, 2016). Students have an obligation to study with a longer process to make students understand more deeply. Undergraduate geomatics engineering takes approximately four years. Some people feel they still need knowledge to get deeper into this field. The longer the process takes to learn the more time it takes to better understand. Students will find easier to understand knowledge in English. English is very important to support students in the further learning.

Application in a lecture in geomatics engineering requires a lot of tools. Students need tools to make learning easier, such as mapping software. The software used for mapping also requires English skills for students to easily operate it. The tools used for mapping are easier to operate by having English skills. In addition, books supporting engineering subjects tend to be in English. Almost all reference sources such as books and journals on web research are in English. If you want to understand these books and journals, you must have English language skills.

Someone may still find it difficult to learn English because they only learn it at school and it is not practiced in daily activities (Rintaningrum, 2016). Even though as geomatics engineering student, English is an important thing to support learning activities and self-development. However, a person has different ways of learning. Different ways for person to develop their personality (Rintaningrum, 2019). In the learning process, a person experiences different stages and ways. This difference is very natural. How to address problems and respond to other people's opinions will also vary. Geomatics engineering has good alumni and we have scheduled Hello Alumni activities. This activity will increase student relations. By sharing knowledge, students can find out how to solve problems. It is possible for us geomatics engineering students to interact with students outside the campus. That way, we have English Class activities aimed at developing English skills during presentations, interacting with other people and getting references. English language skills obtained during college can be implemented in the world of work.

## **Conclusion**

In the perspective of geomatics engineering students, English is an urgent matter. Students will find it easier to understand problems and solve them when reading journals or books in English from abroad. Students can also be fluent when operating software and mapping tool by having English skills. English makes it easy for students to increase knowledge and skills in the field of geomatics. The knowledge and skills that have been obtained can be implemented in the workplace. So, all things that are supported by English skills, it will be easier to understand and handle them.
